CV
My Profational works

I’m Sahar Hamidi, an architect and visual storyteller passionate about thoughtful design and the beauty of built spaces.

With a background in both architectural execution and conceptual design, I bring ideas to life through detailed drawings, 3D models, and artistic sketches.

This portfolio is a collection of selected works—ranging from real projects to design studies and conceptual explorations. Each project reflects my dedication to precision, creativity, and human-centered architecture.

Thank you for taking the time to explore my work.

TREE HOUSE

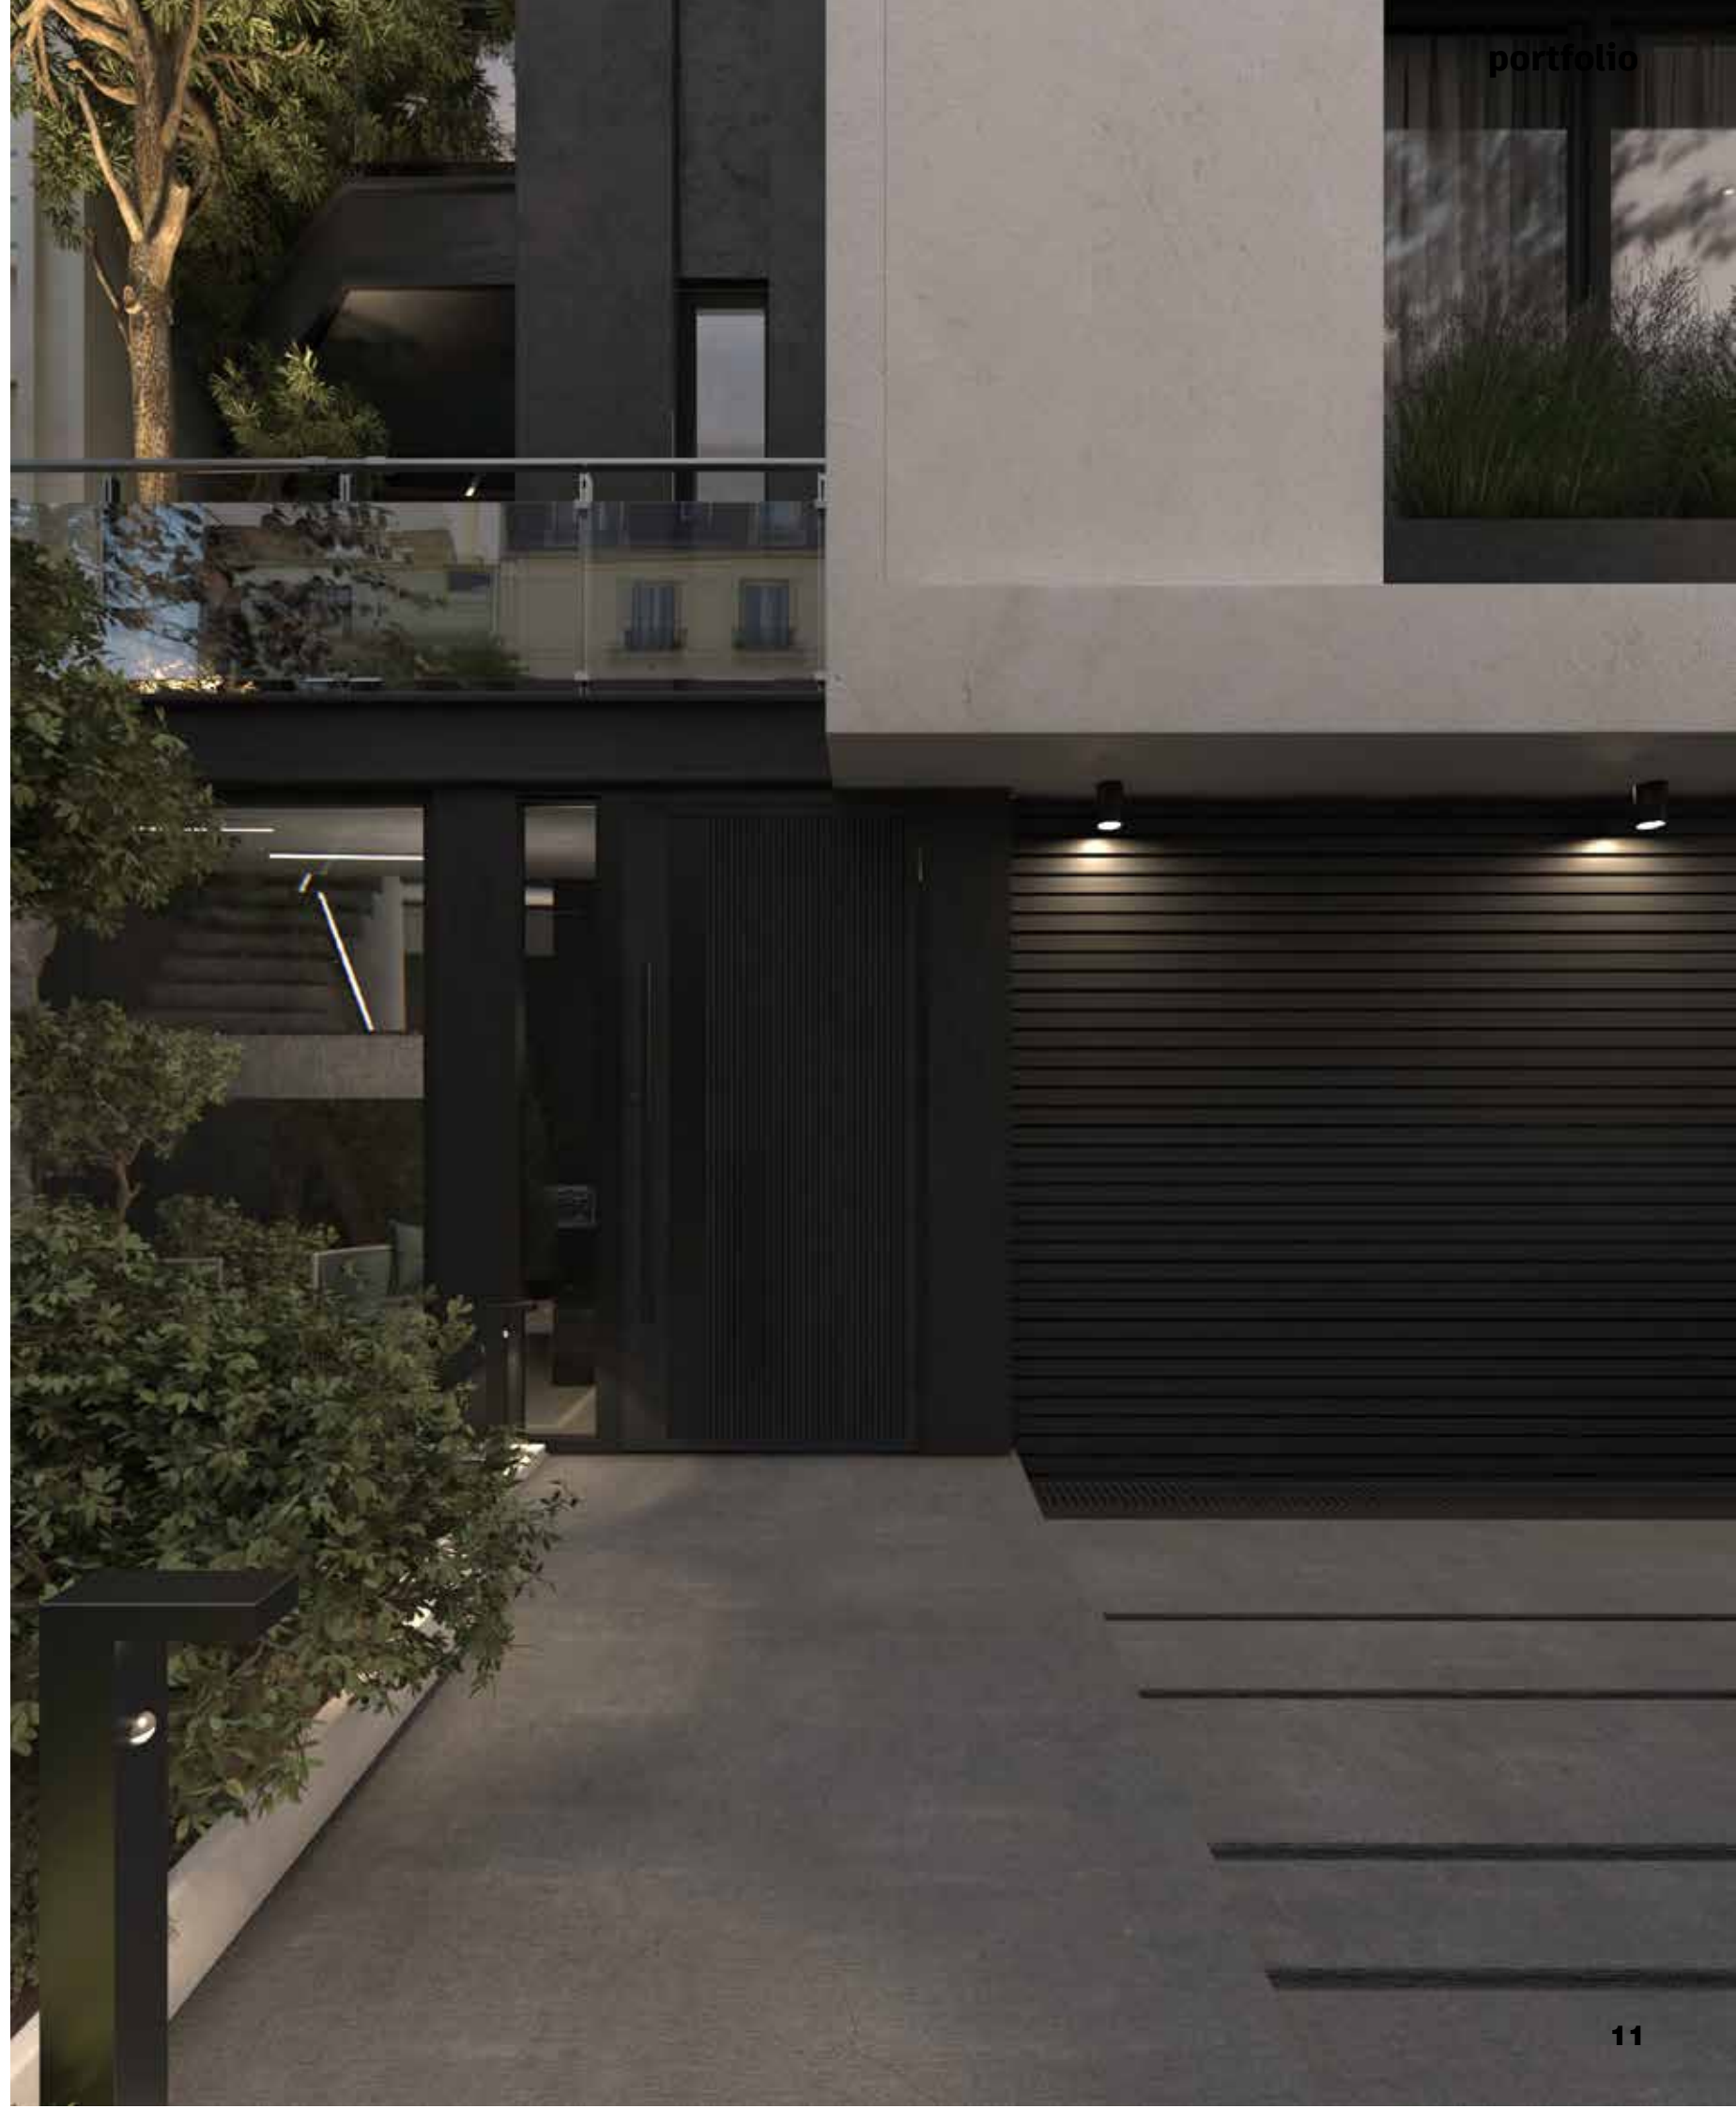

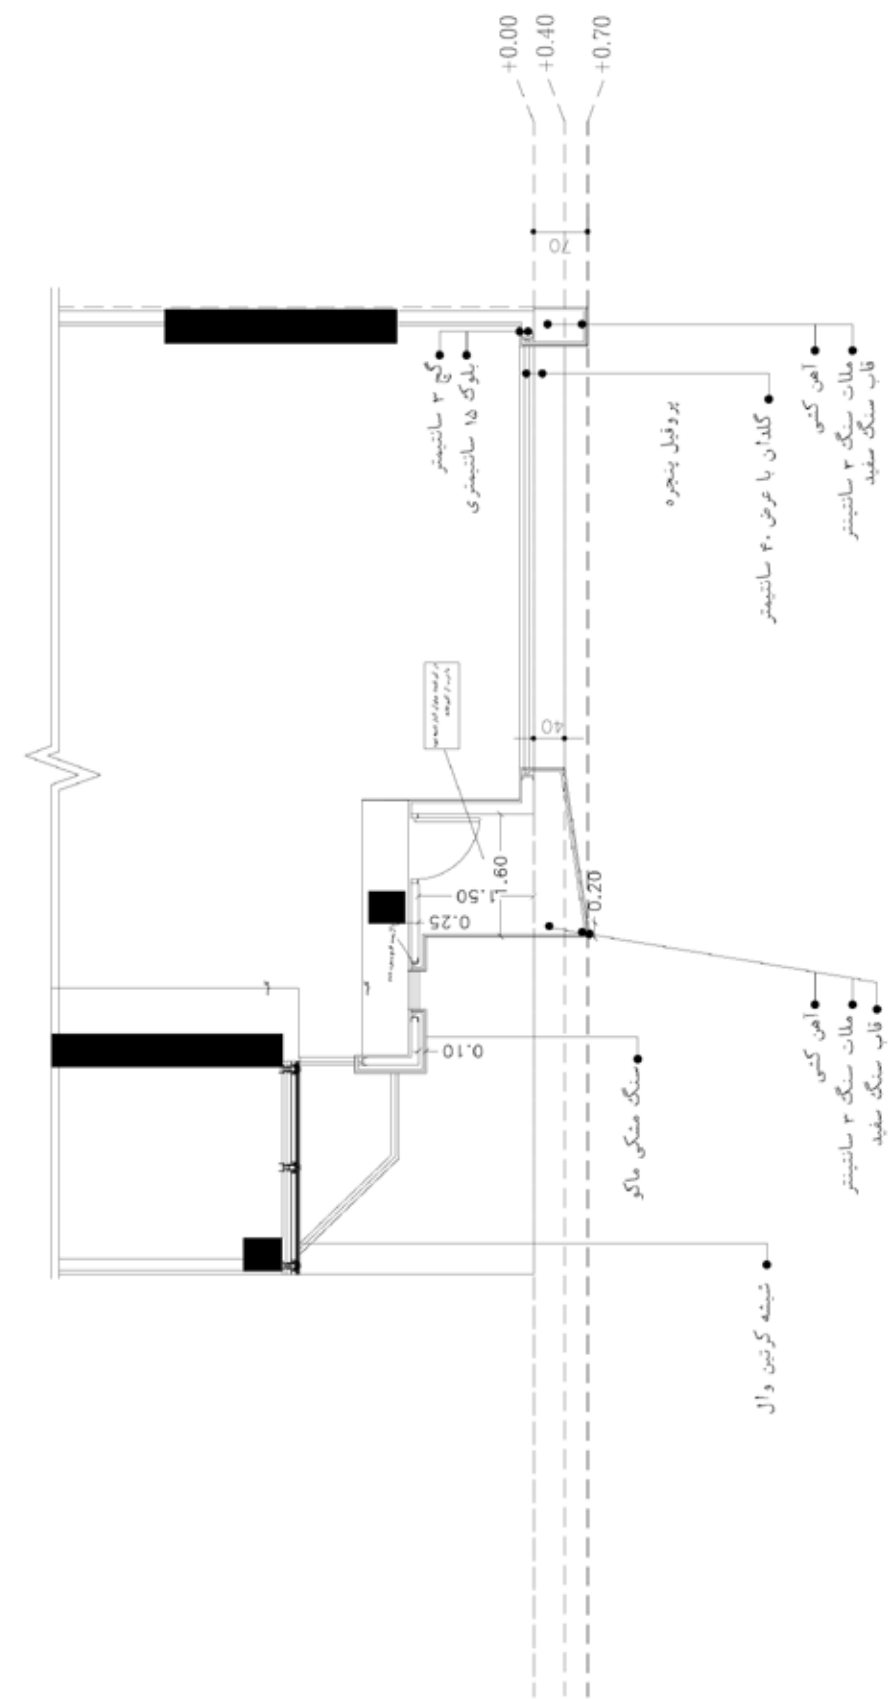

Year: 2024
Type: Real
Role : House
Statuse: under costruction

The core idea behind this project was to creat a living conection between people and nature.

A mature tree becomes an integral part of the architecture -alive, dynamic and growing alongside the residents.

The design carefully respects the surround eding neiborhood and complie with municipal regulations ,ensuring that the project not only inspires but also harmonizes with its context.

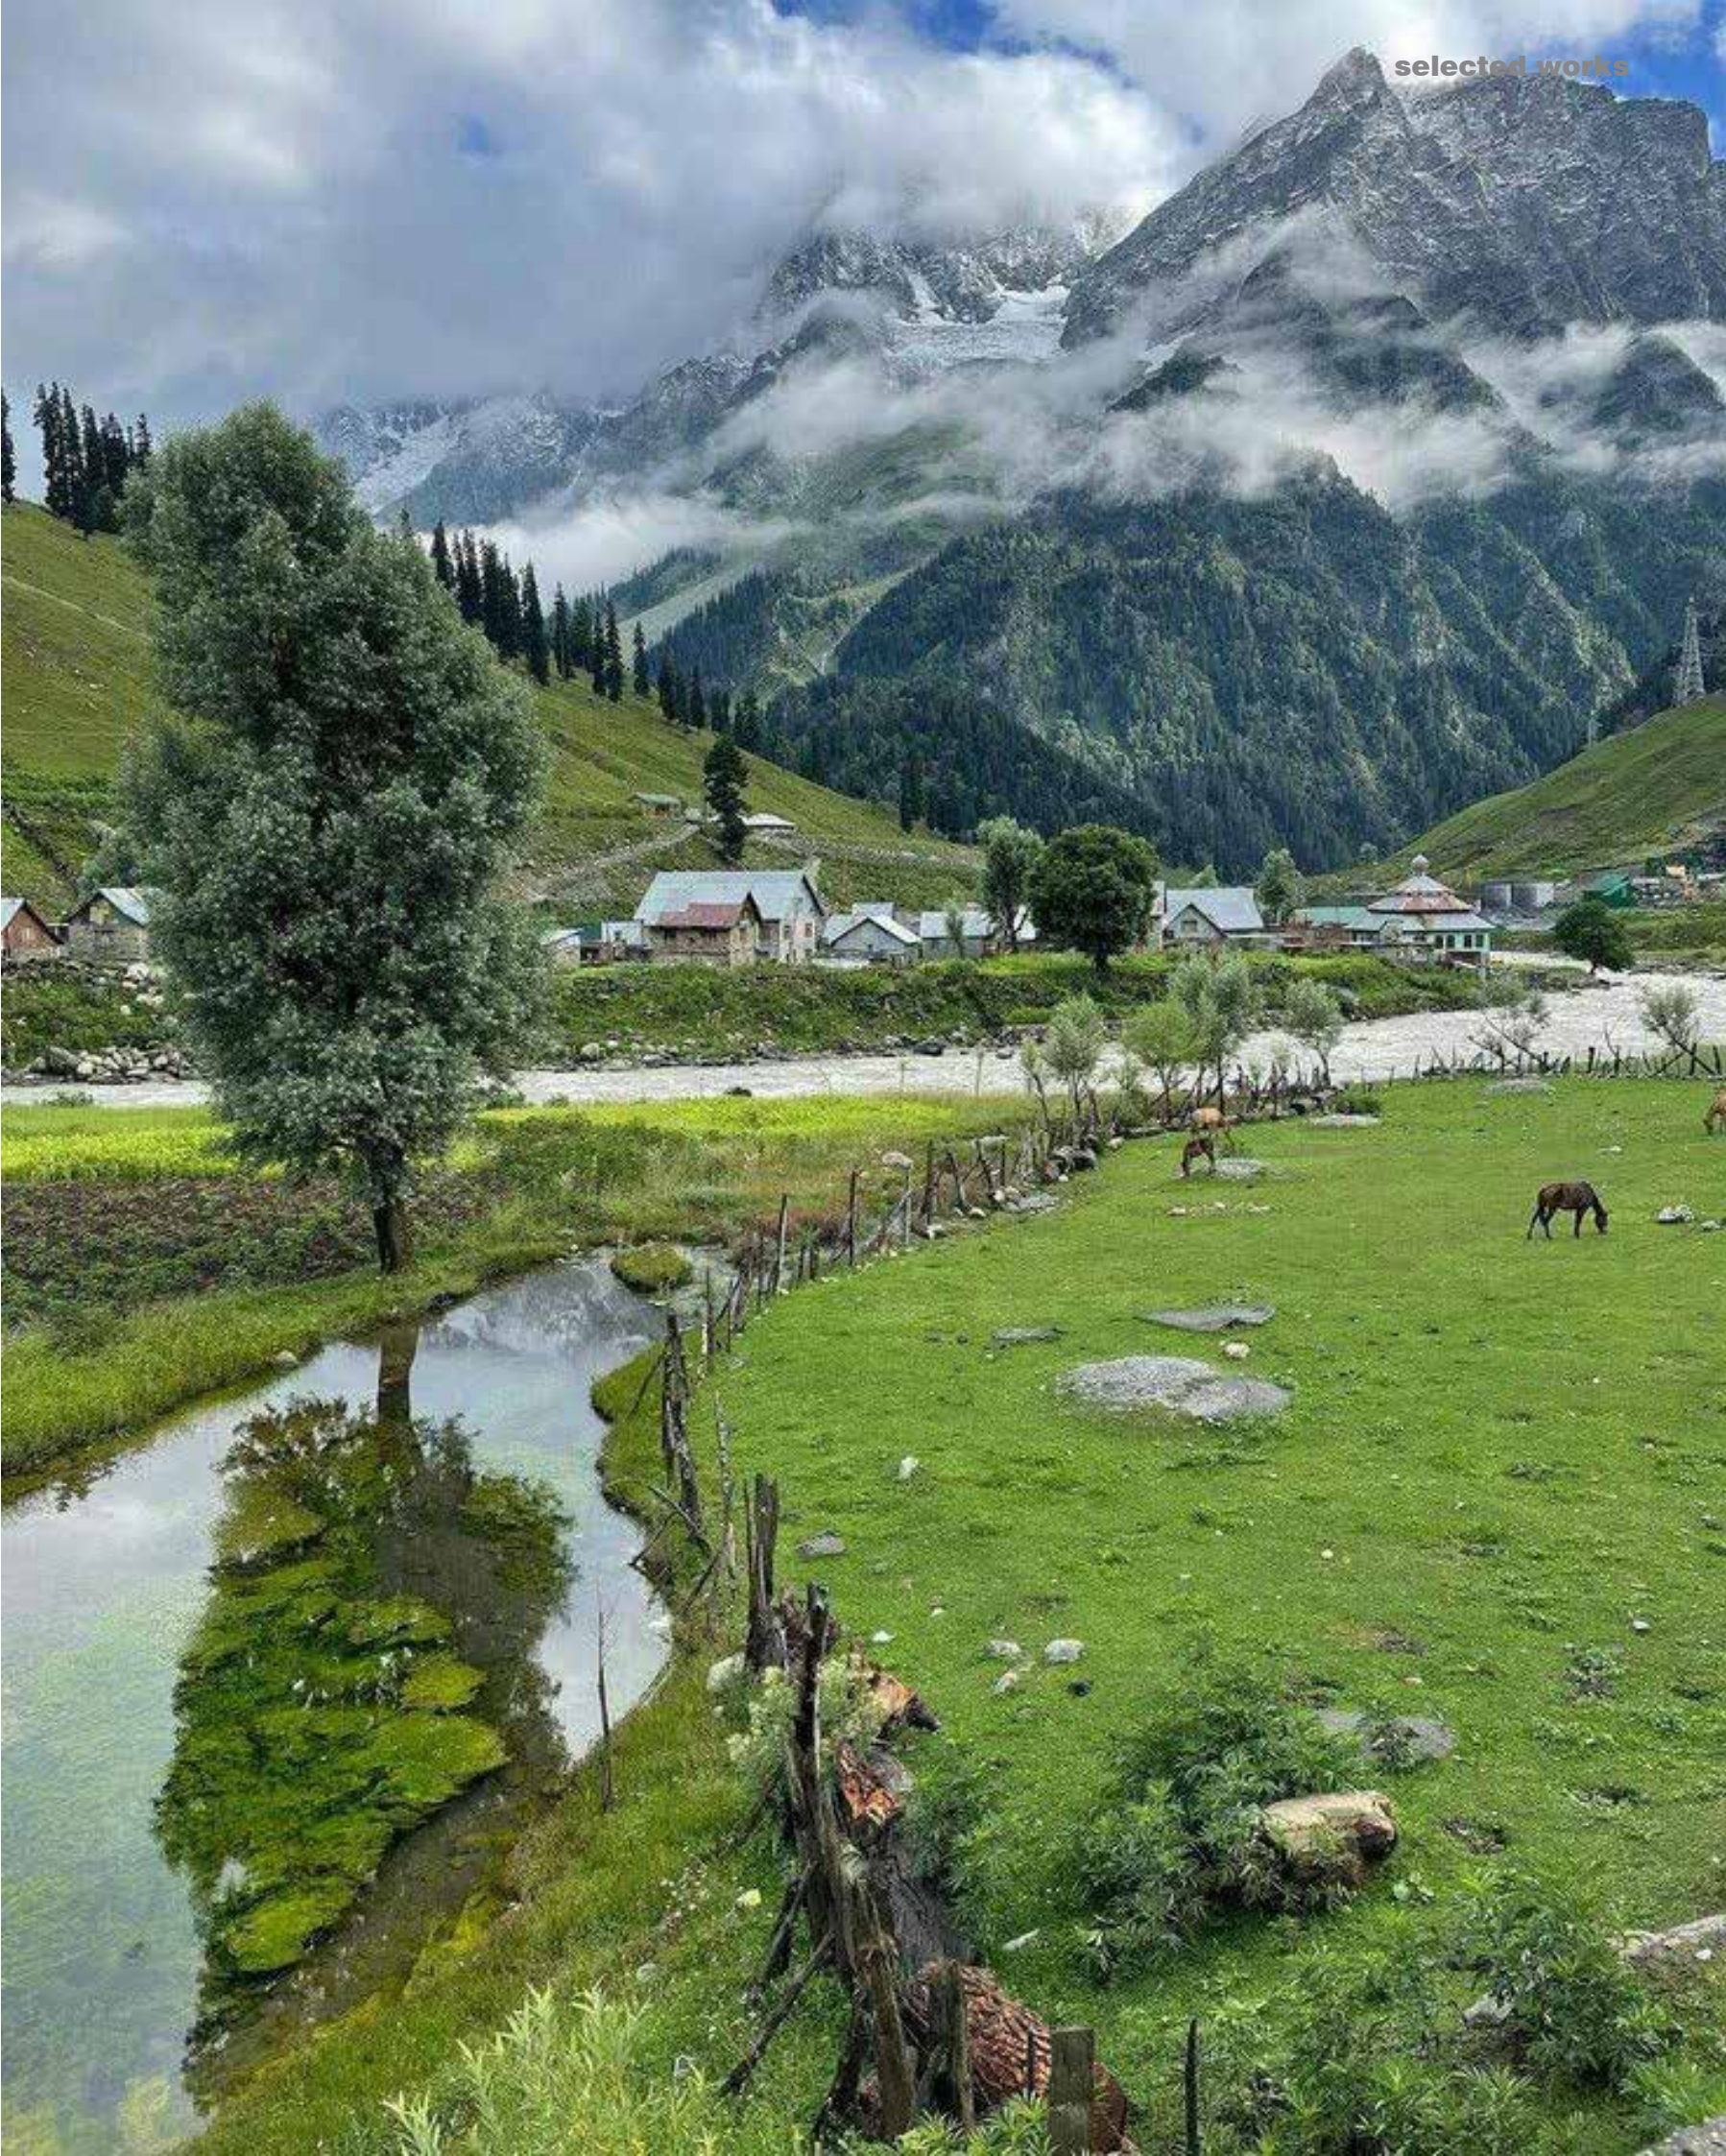

CABIN

Year: 2024
Type: CONCEPT
Role : House

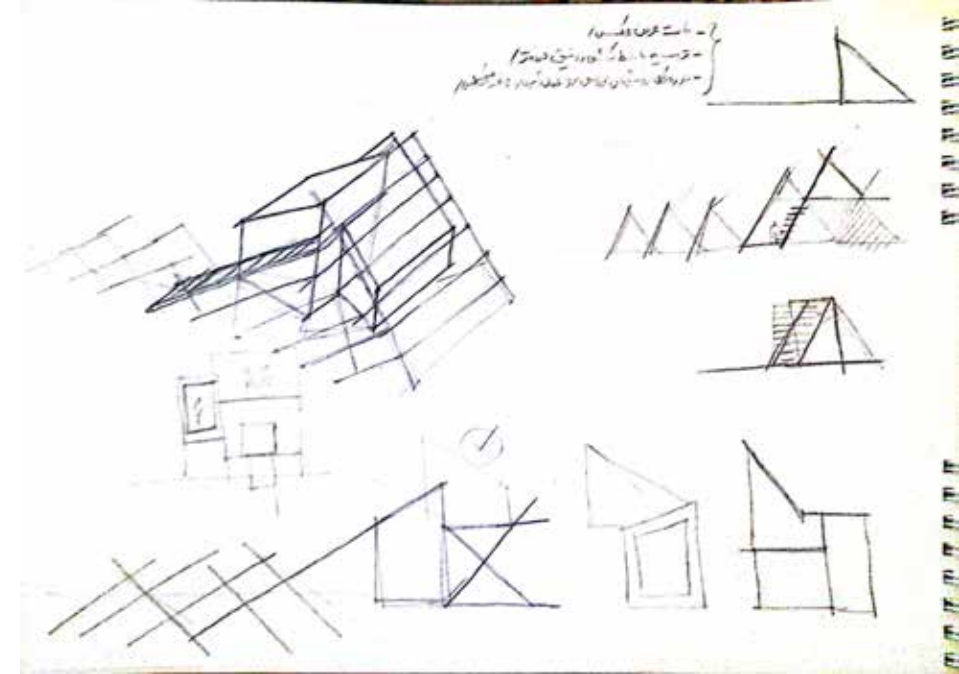

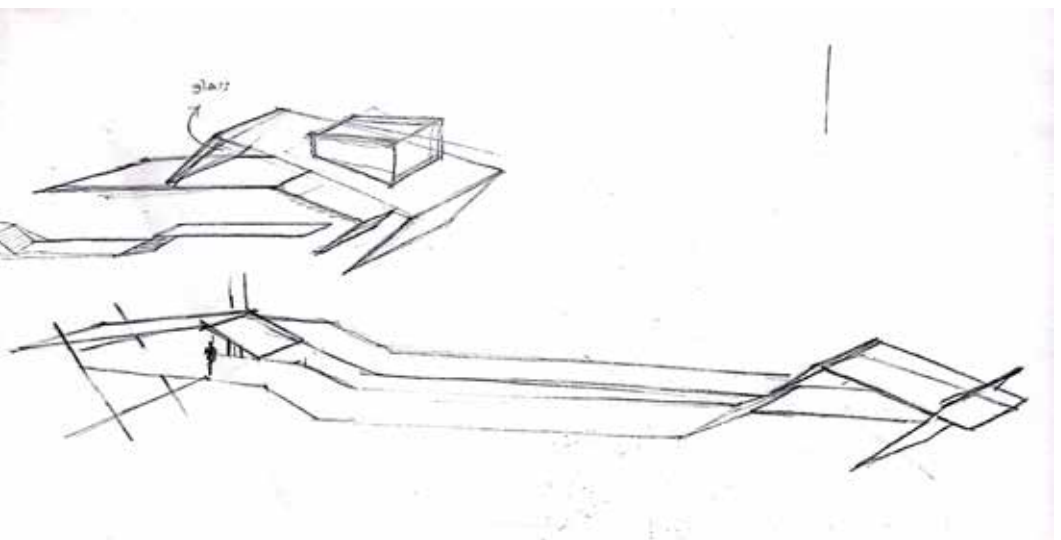

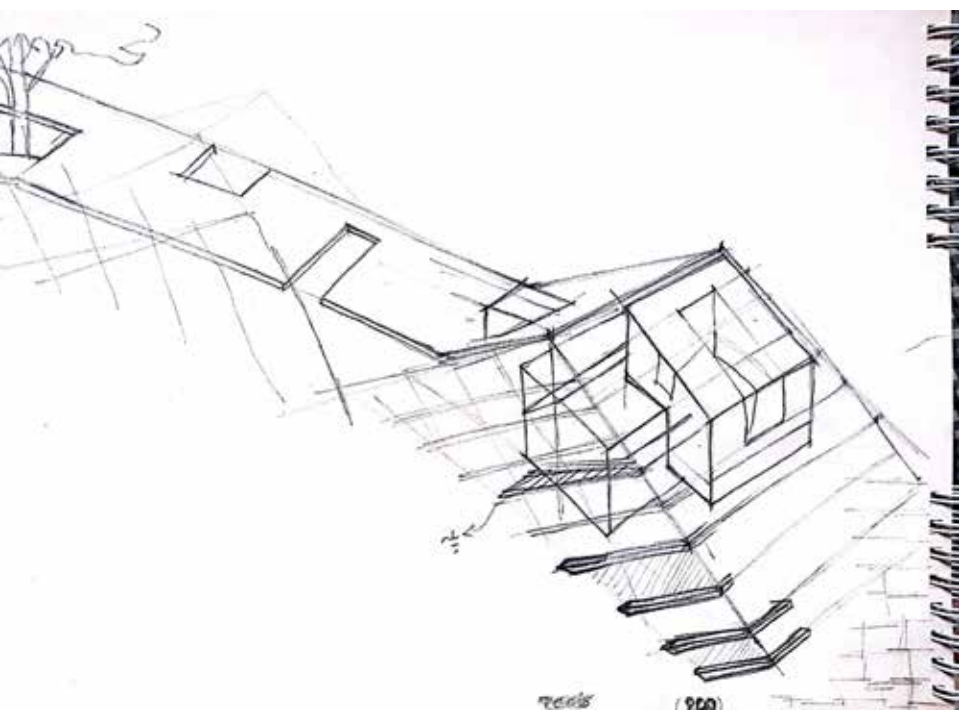

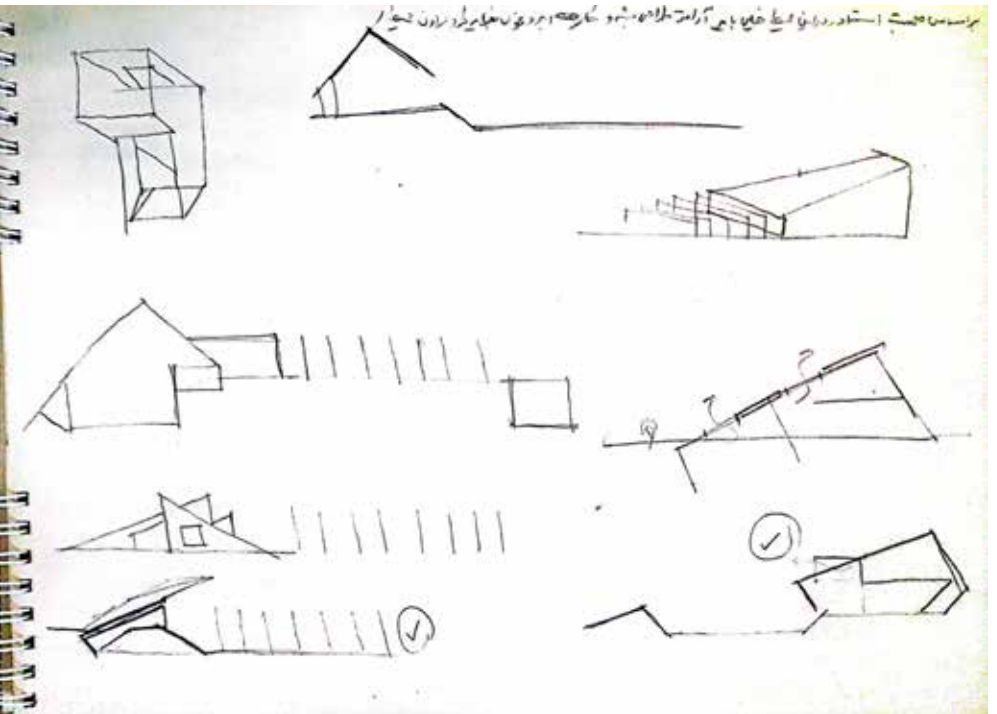

In this design, the aim is to present a new expression of the concept of a small entertainment cottage that has contemporary literature. For a long time, special tourist accommodations have been considered as a special type of building, mainly due to the strange shape of the architecture; The specific location of the establishment, being in an unconventional site, have attracted the attention of tourists, and even separately, airbnb has been welcomed by tourists as one of the subcategories of the typology of accommodation spaces on the accommodation tourist website.

In this design, the goal is to achieve a significant idea in the architectural compliment standard of a rich space but with freedom of expression in choosing the identity of the proposed building. In this project, a tourist accommodation should be designed in a desired landscape from the personal and consumer point of view. The project structure should be a temporary structure without the need for excavation.

The main goal of this site is minimal intervention in nature and design in harmony with climate and nature

- In the first stage, as the imagination of all the designer's imaginations as a space that can or maybe should be; It was put on paper, which later started another story...

- In the end, the finished work was designed with wooden details and bolts, which can be built with minimal intervention of mechanical forces and with the help of local forces. Also, the space with its minimal design takes itself to the sidelines and draws attention to the environment and nature.

- In the next step, among the studied studies, in an effort to match the design environment as much as possible, 4 specific forms were tested in the environment.

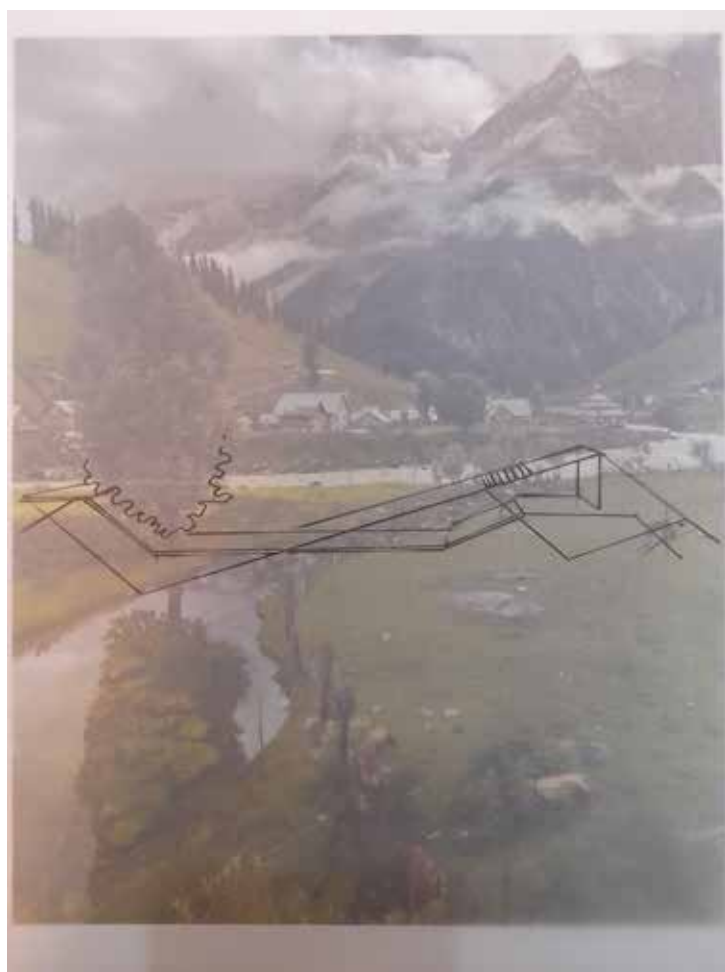

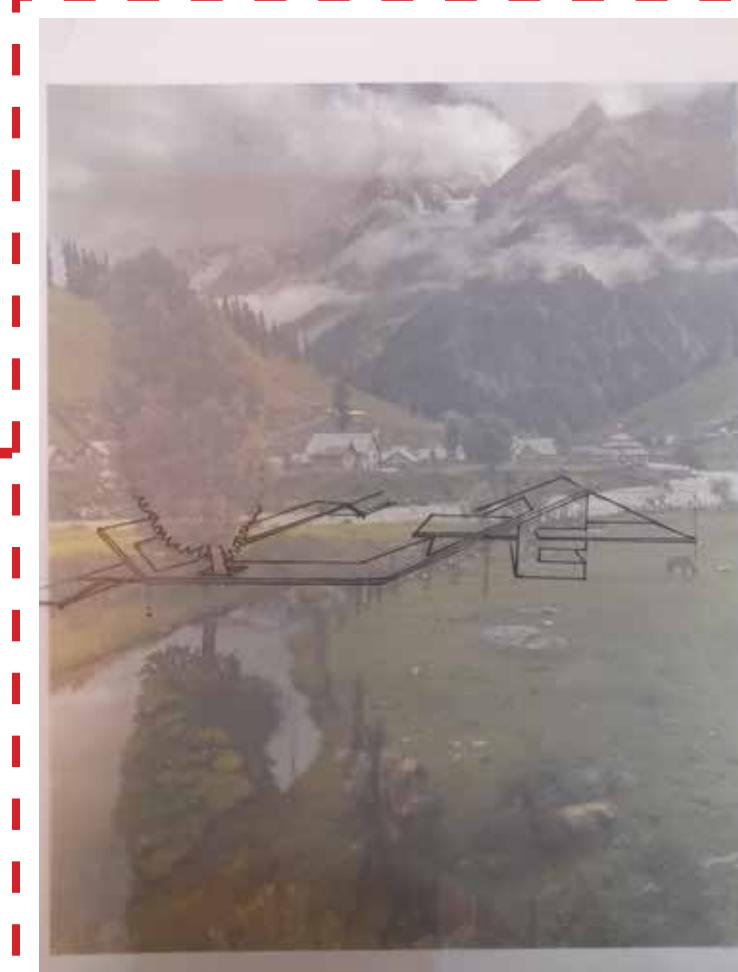

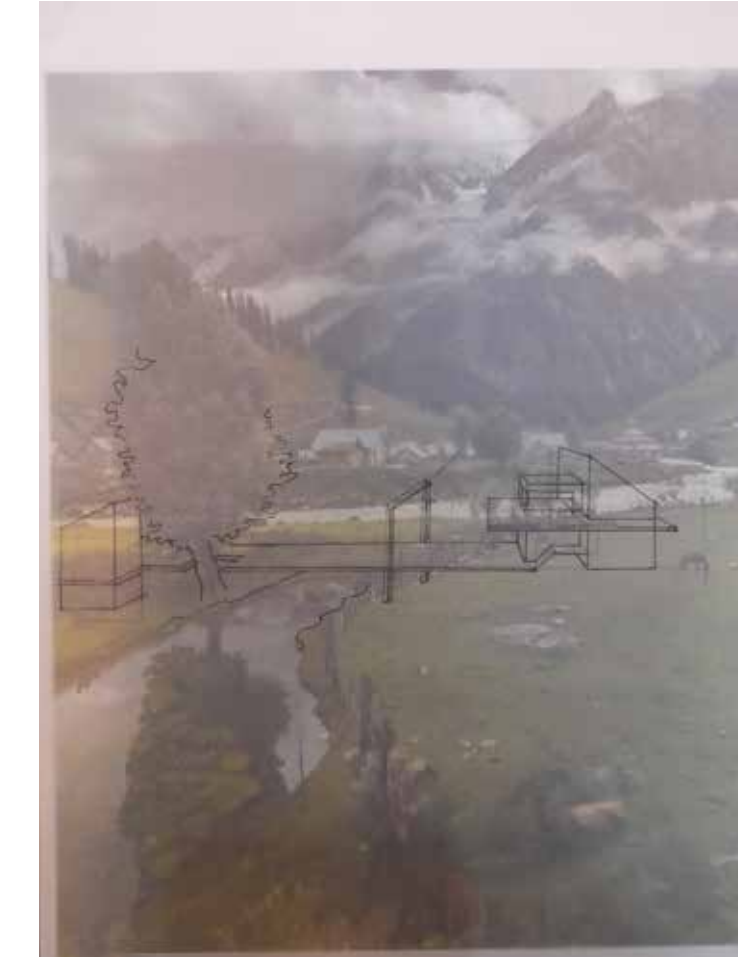

Paying attention to the site and, accordingly, the user axis for the etudes, the following items were considered

The use of the gable form due to the traditional texture of the field and having a repeating form in line with the climate

Use of natural materials

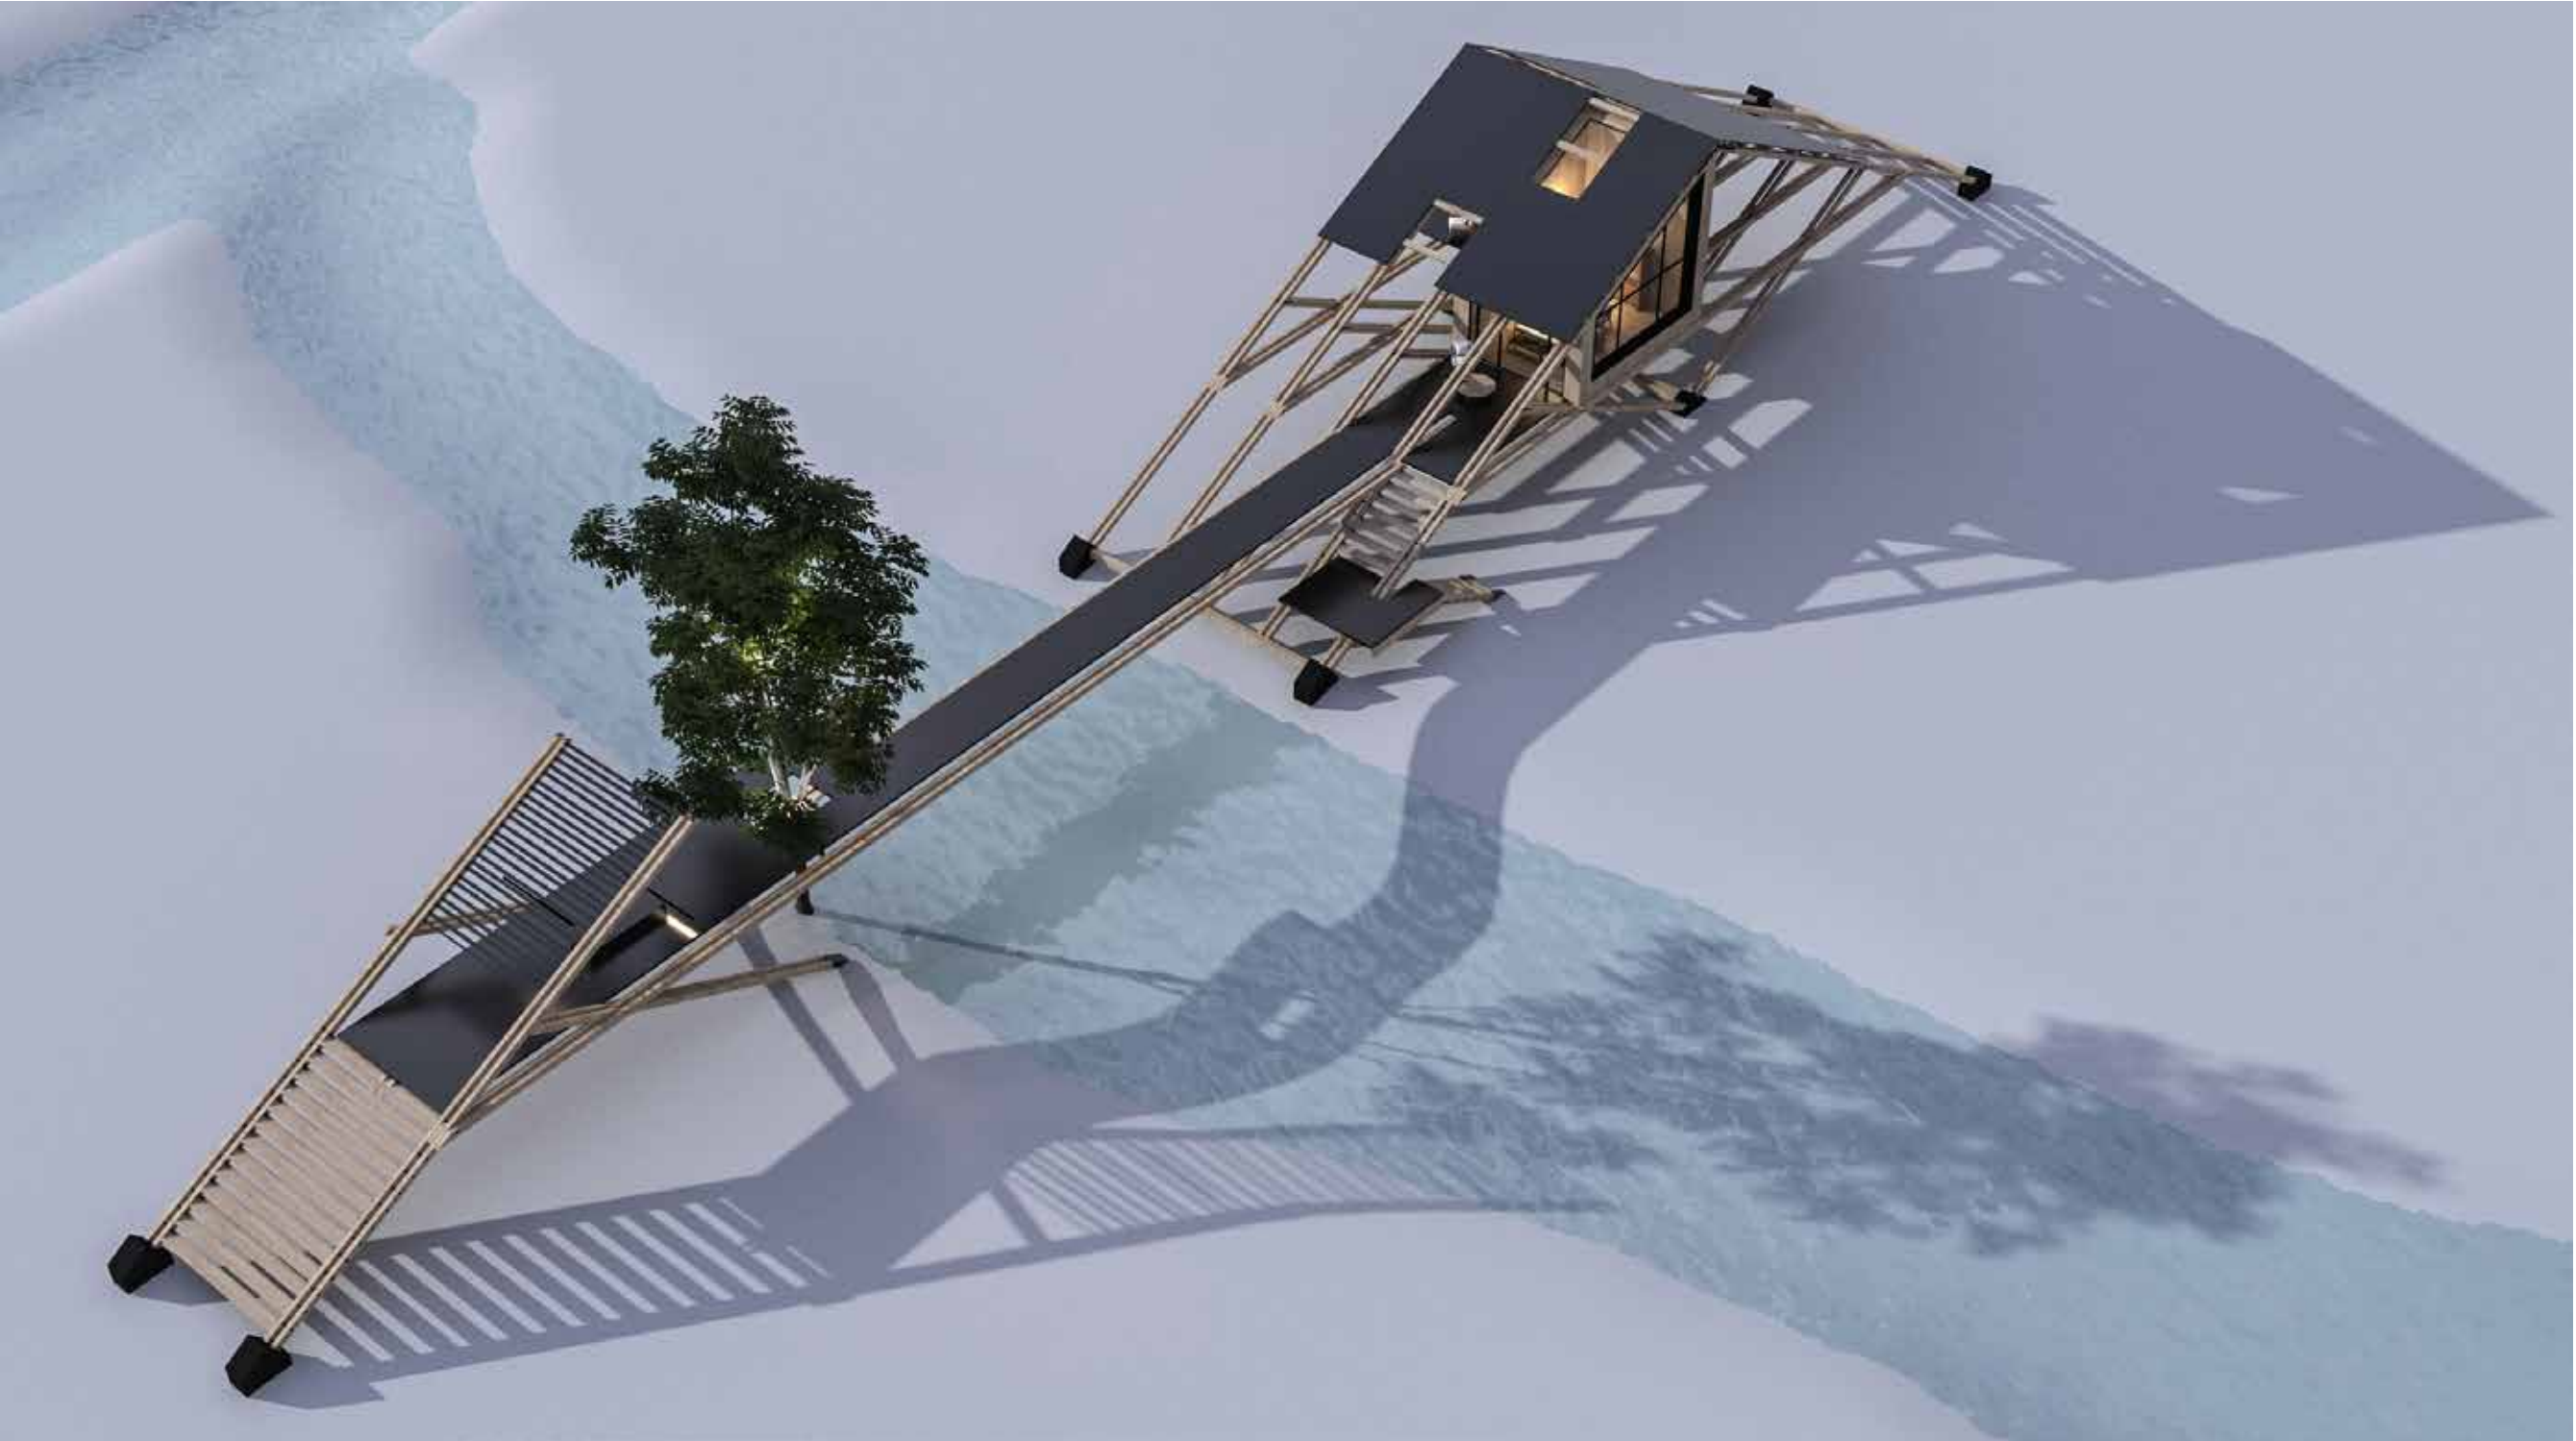

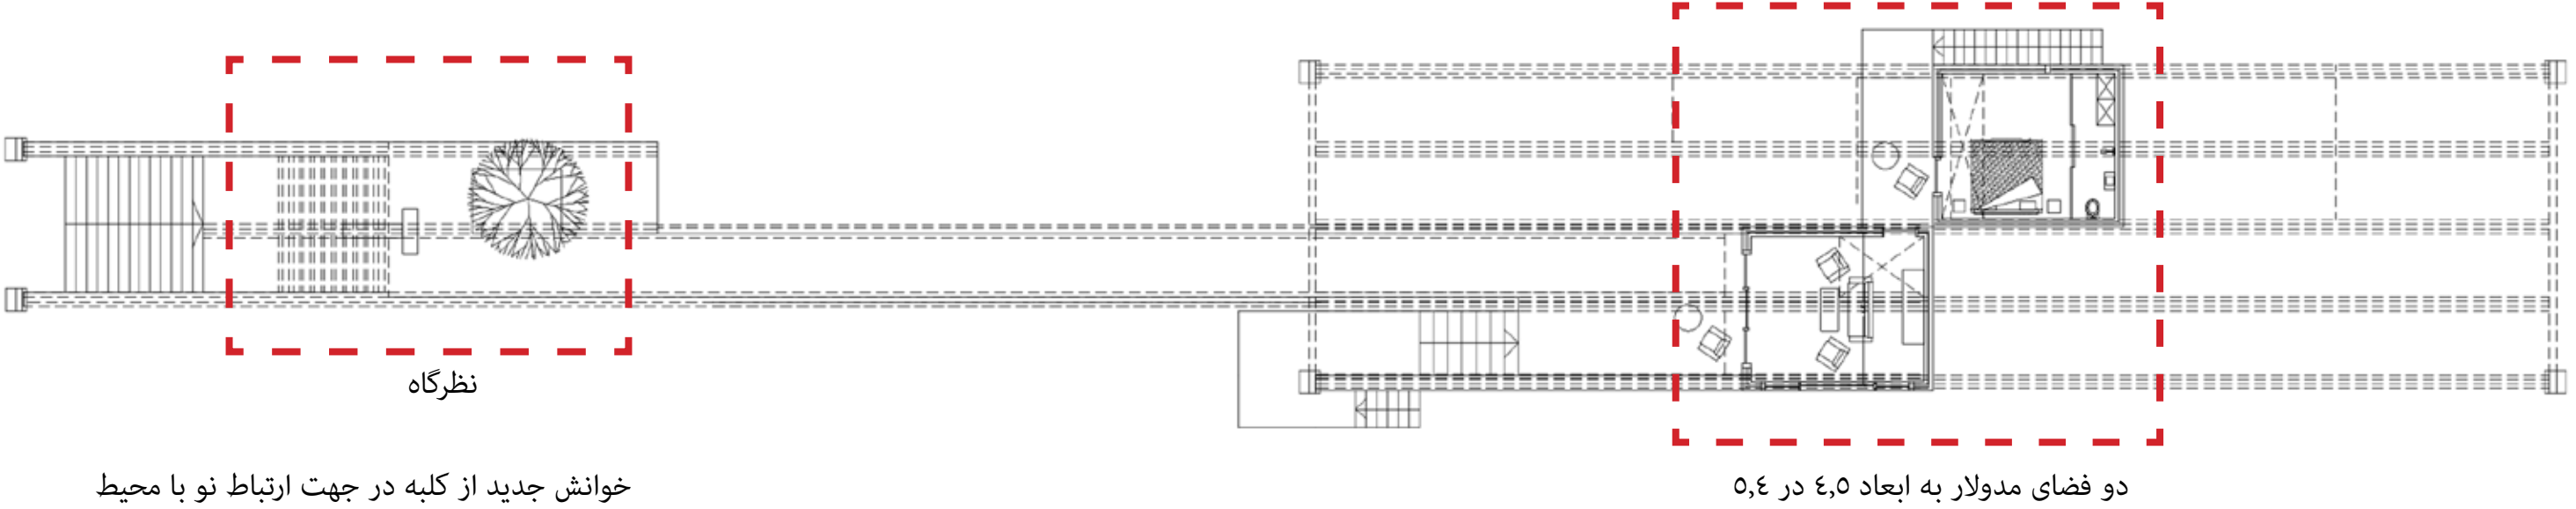

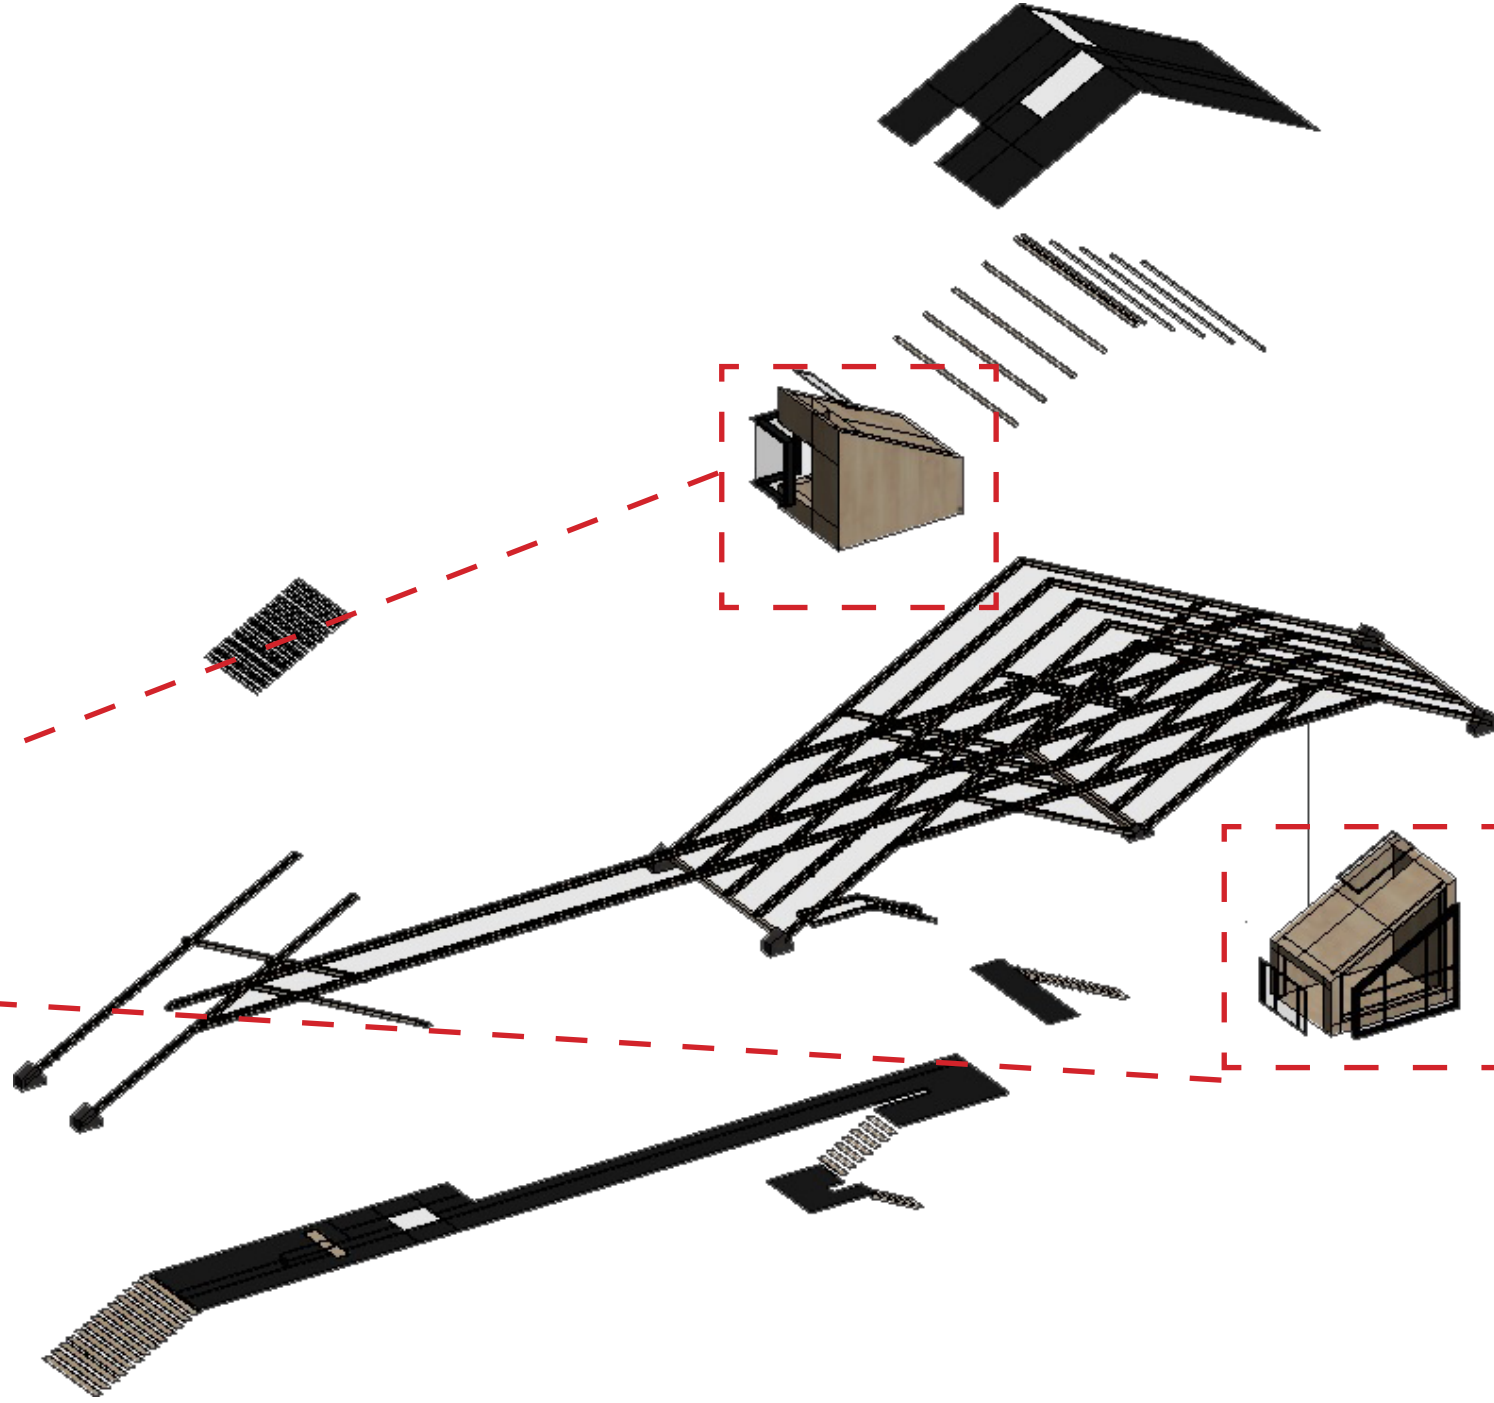

No intervention on the ground

- Chosen study due to having the most main elements to match the environment and connection with the high-density site

- The cabin space is designed from two modular spaces for living and resting space, this system also helps in the ease of building a cottage

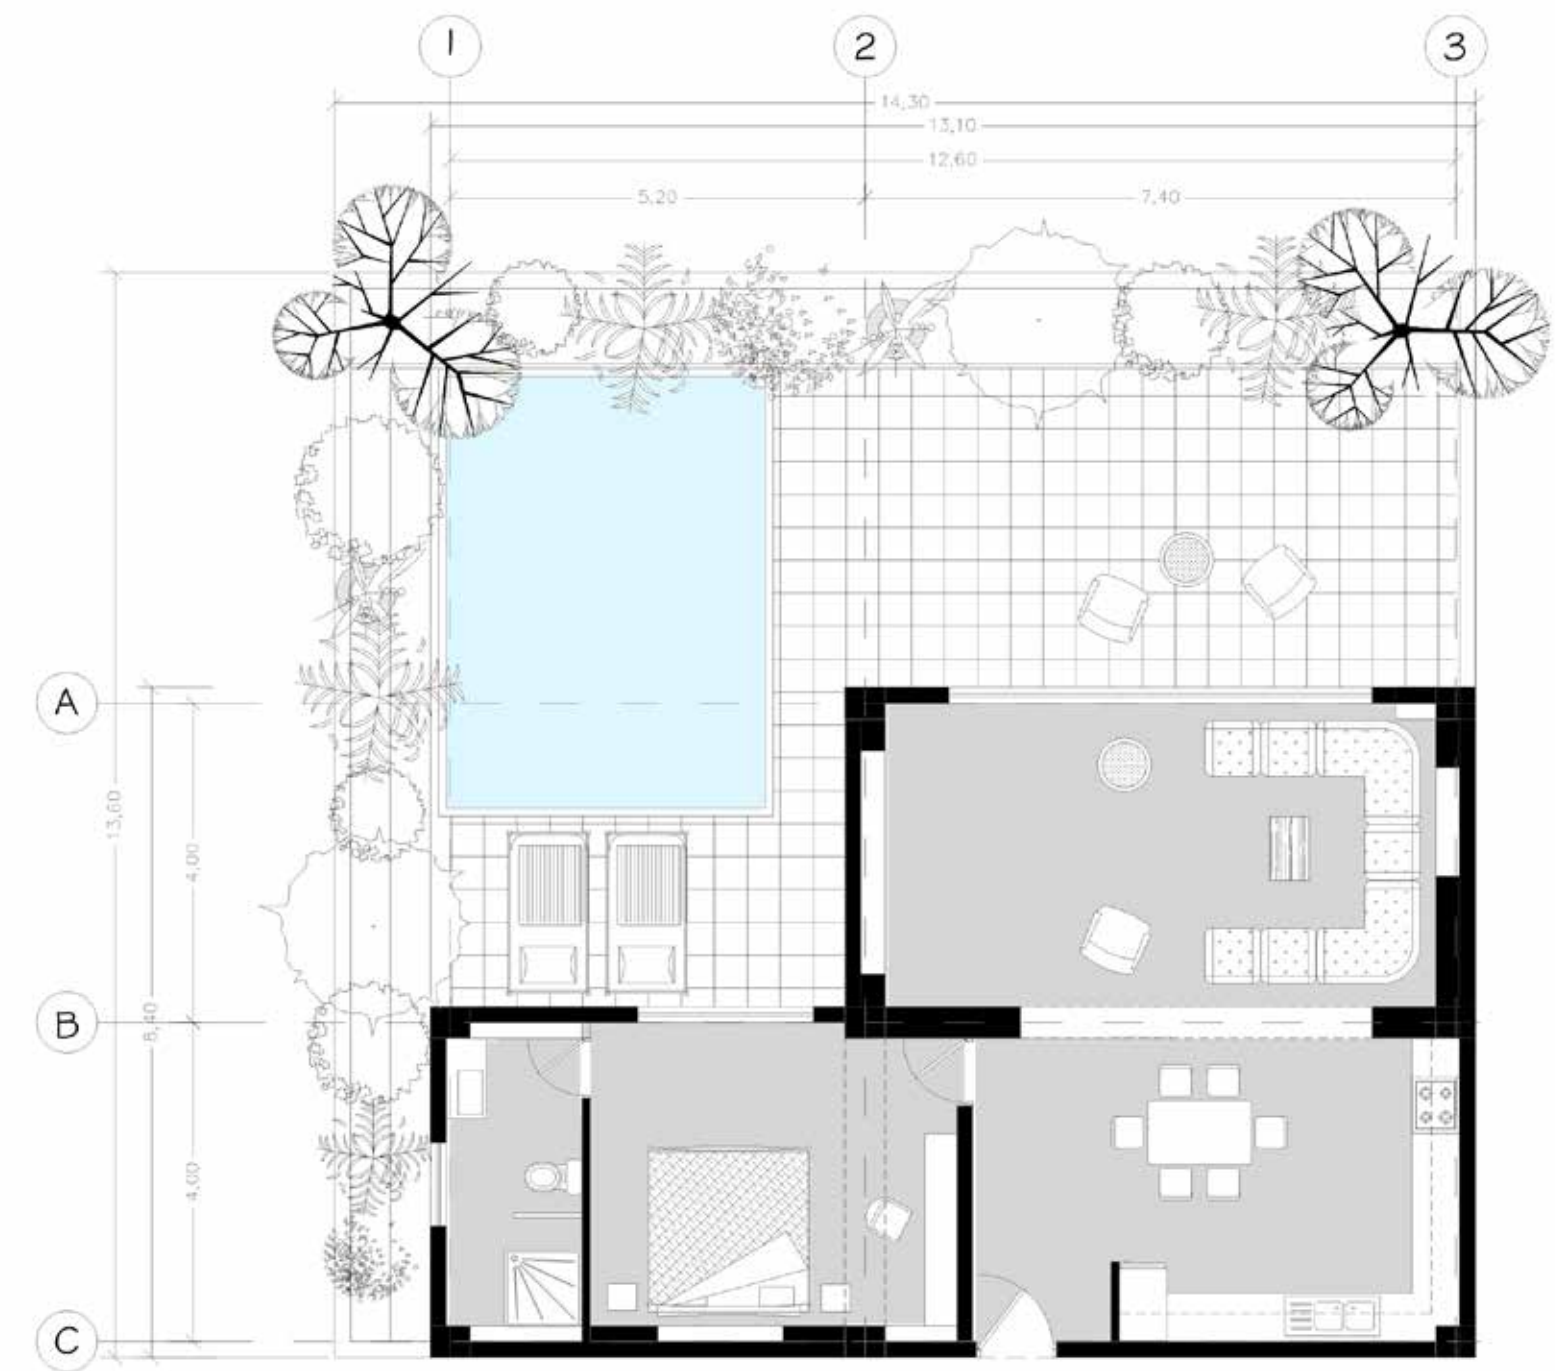

- The cabin space is designed from two modular spaces for living and resting space, this system also helps in

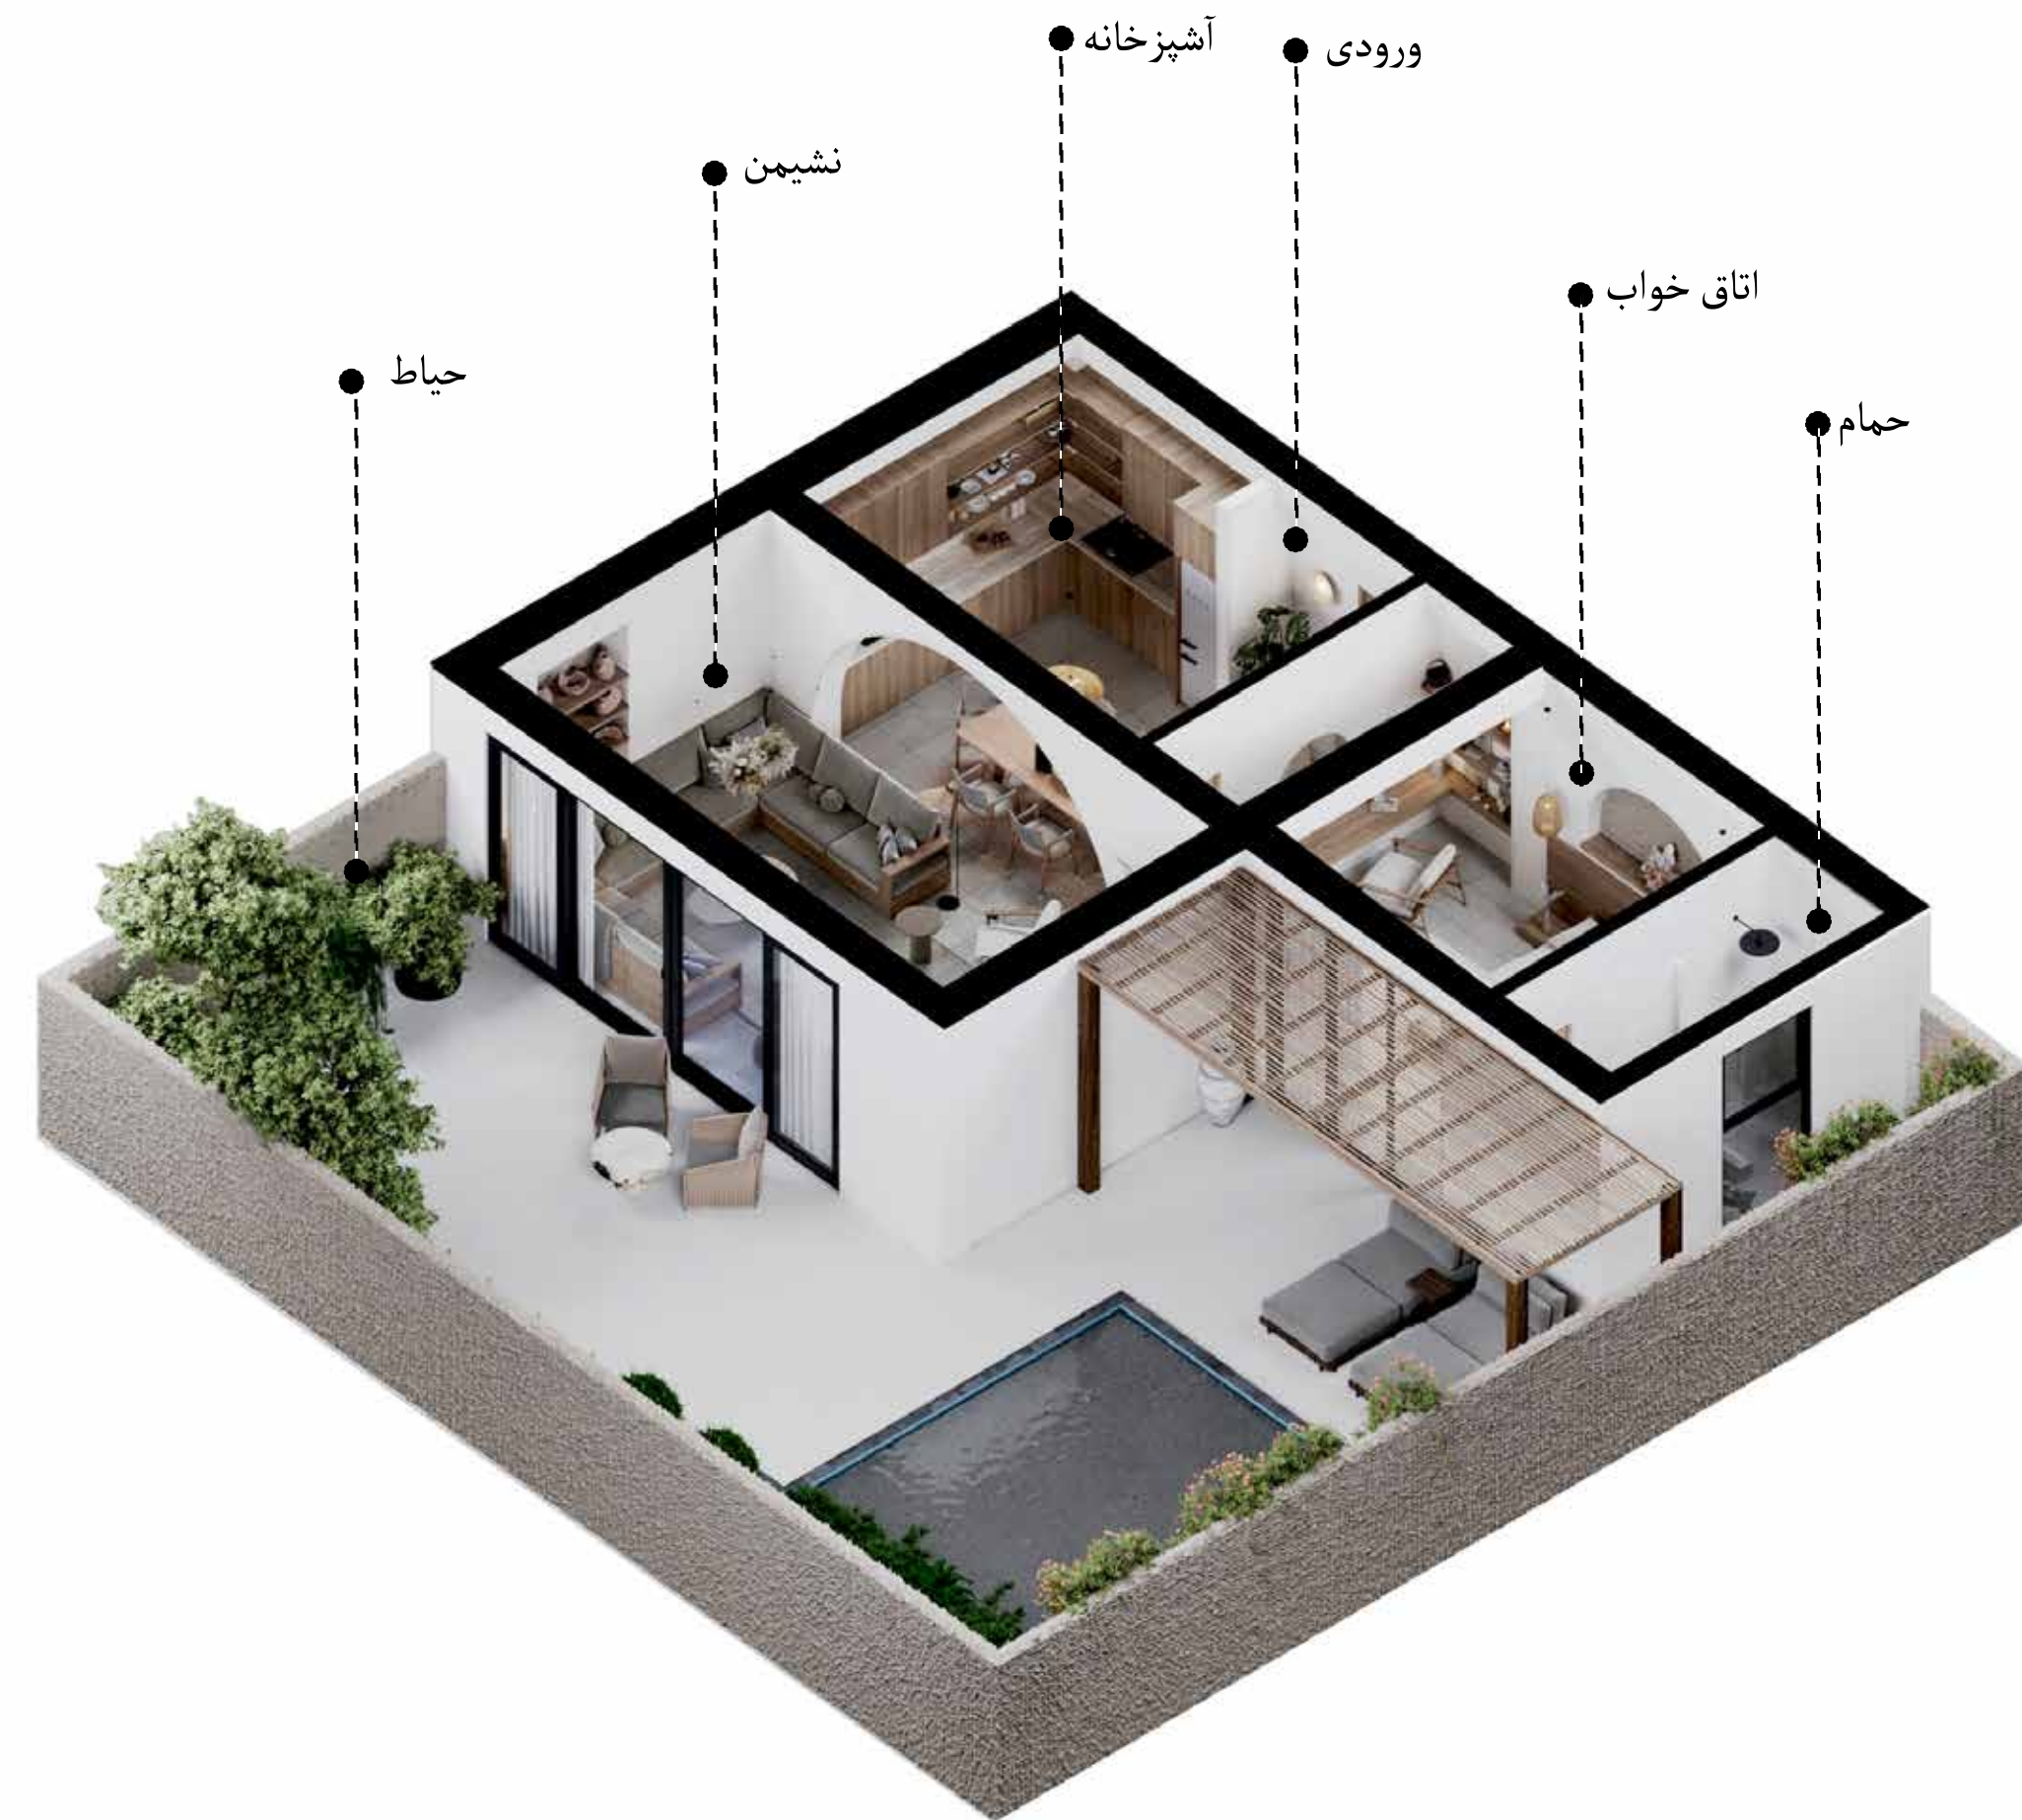

COZY VILLA

Year: 2025
Type: CONCEPT
Role : Villa

A cozy, mediterranean - inspired living room with natural textures , soft neutrals , and a costum sectional sofa. Warm wood , stone details, and a dried floral .
The plan shows its connection to the patio , pool and nearby rooms.

MAGHSOODNIA APARTMENT

Year: 2022
Type: Built
Role : Building Apartment

This multi-story residential project features a clean ,minamal facade using a neutral palette of gray stone and black metal accents. The entrance is defined by symmetry, simplicity, ans clear geometry, offering both elegance and security . Attention to detail and material harmony make this building a refined addition to the contemporary urban fabric.

THIS IT RENDER

PARDIS CITY VIEW POINT

Year: 2018
Type: CONCEPT
Role : Landscape-Urban

This architectural thesis focuses on designing a multi functional urban edge and pedestrian pathway on a hill in pardis city . the project integrates recreational and practical elements , offering scenic views , walkable routs and a thoughtfully designed public space that connects nature with the urban fabric.

VILLA JARYAN

Year: 2022-2024
Type: INBUILT
Role : VILLA

A blend of contemporary simplicity and harmony with nature. Designed for a family that values serenity ,light , and scenic views. This villa embaraces a minimalist approach where spatial organization revolves around a seamless conection between interior ans exterior.
